# Creating JSP in Eclipse IDE with Tomcat server

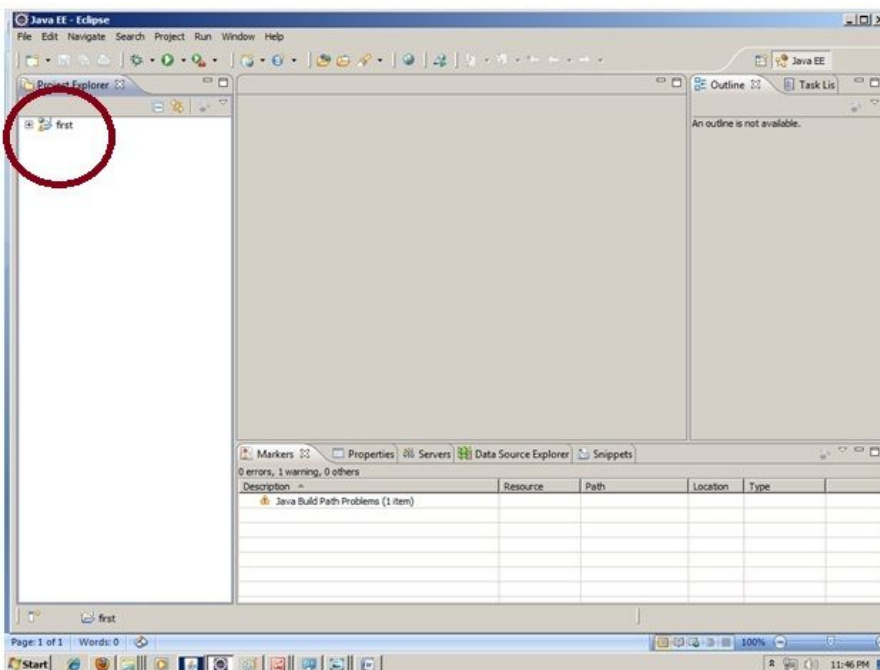

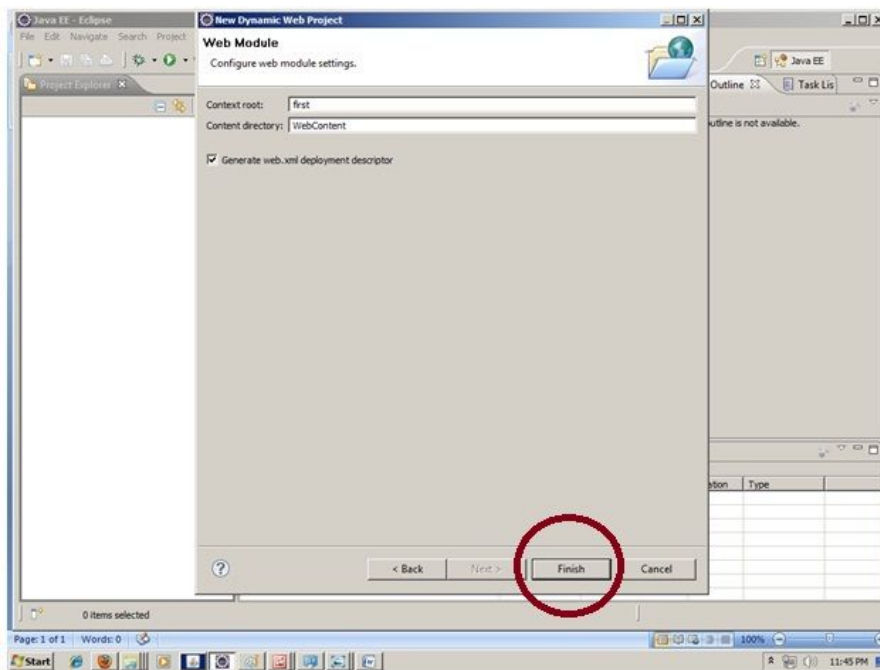

- Create a Dynamic web project
- create a jsp
- start tomcat server and deploy the project

## 1) Create the dynamic web project

For creating a dynamic web project click on File Menu -> New -> dynamic web project  
-> write your project name e.g. first -> Finish.

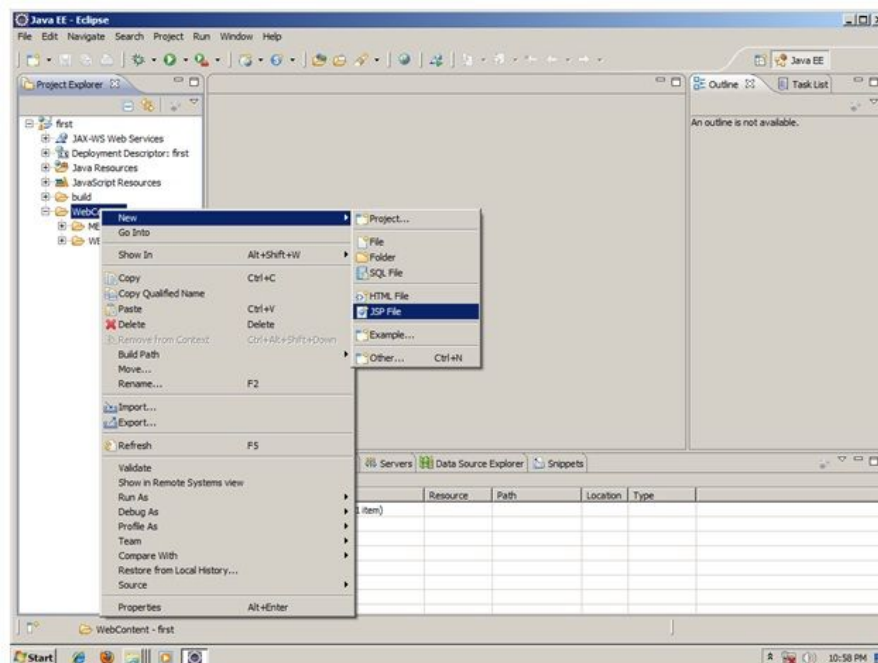

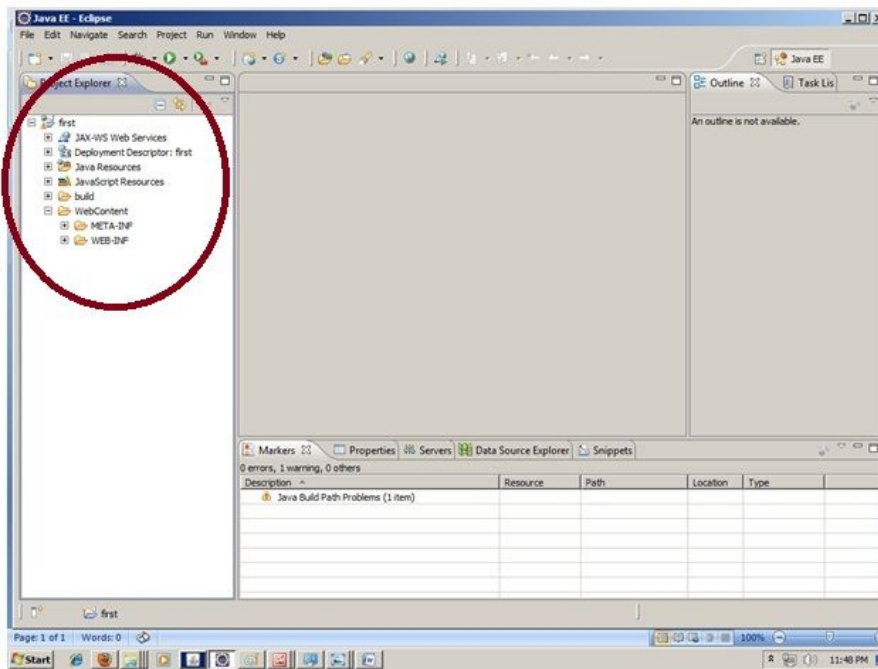

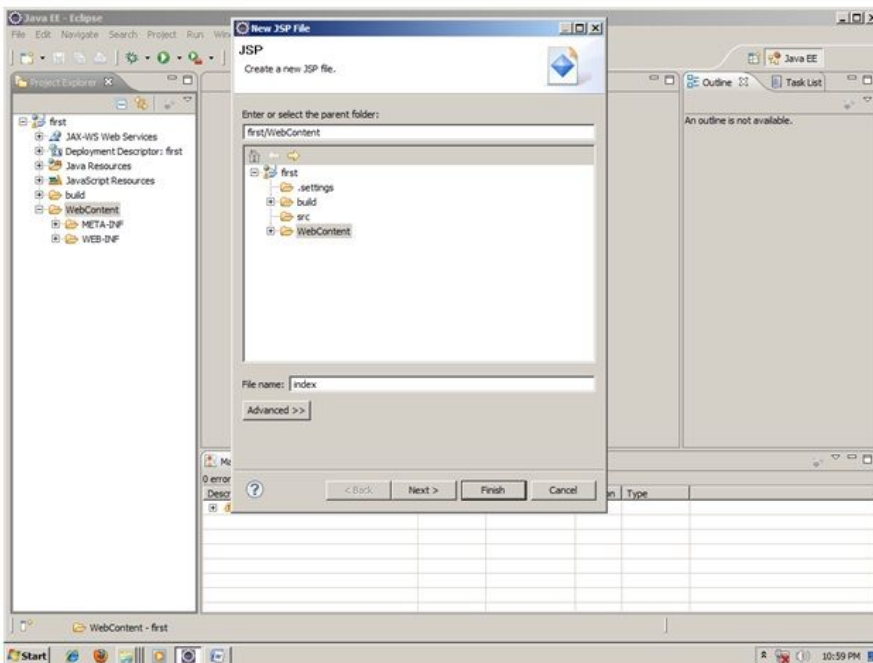

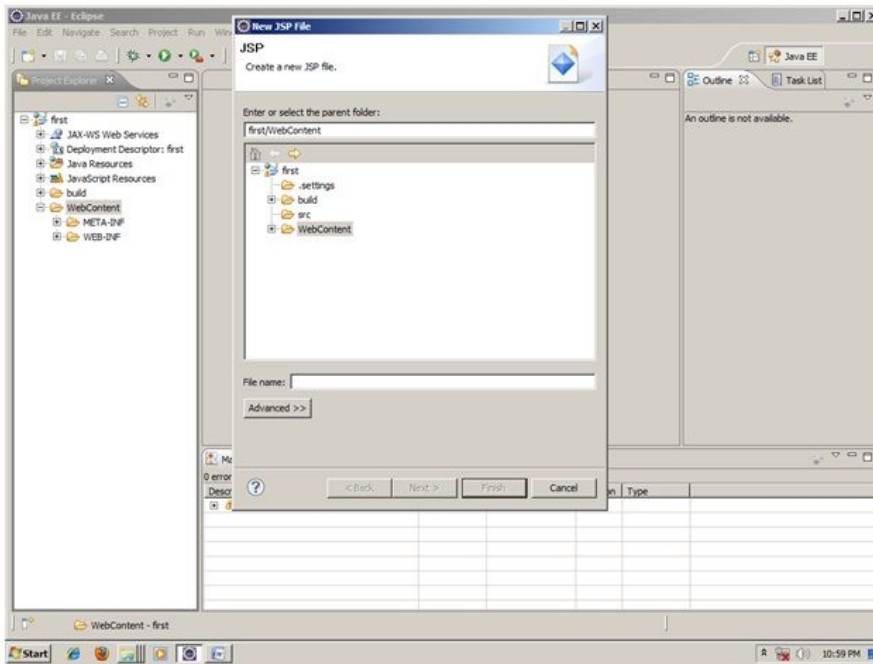

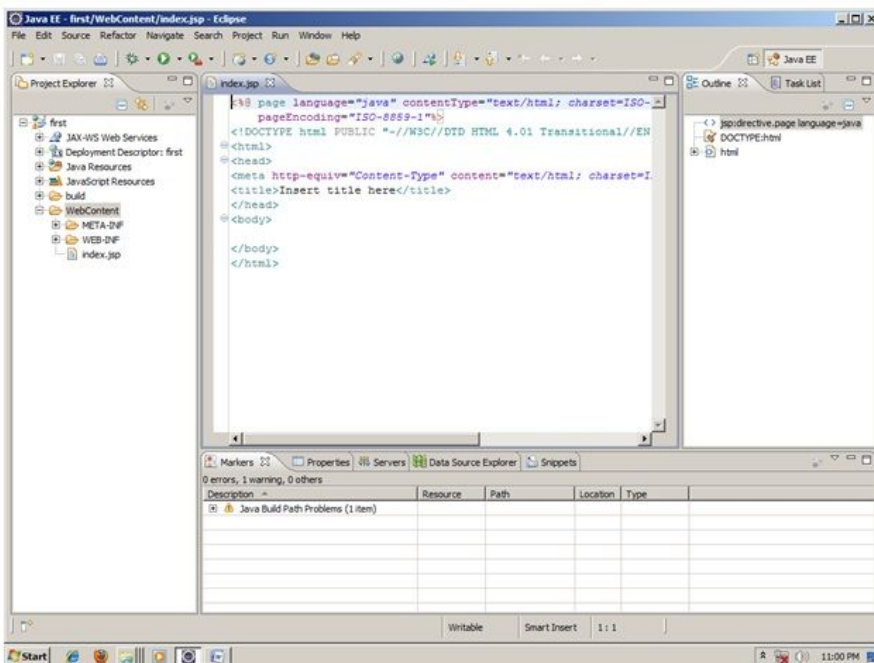

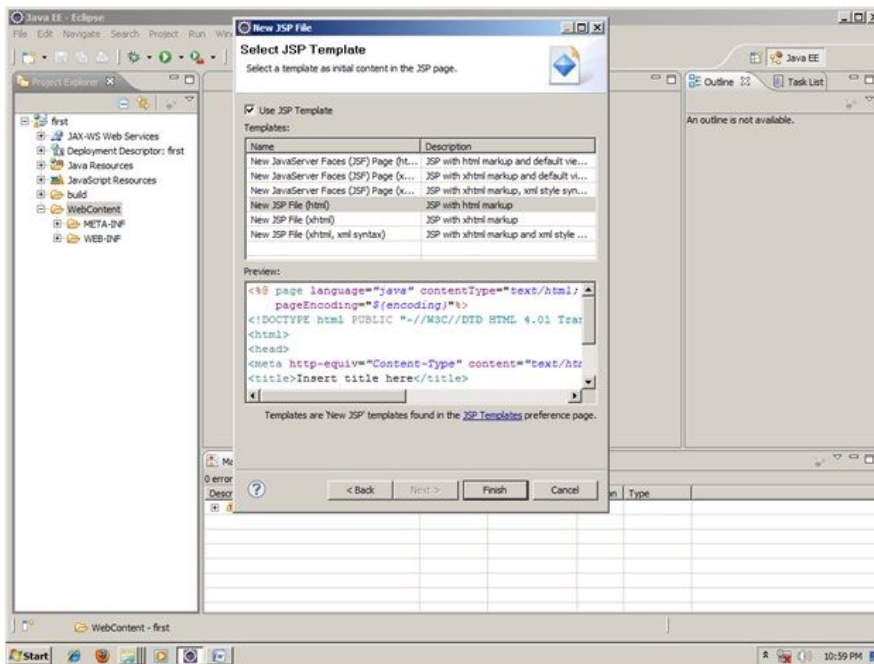

## 2) Create the JSP file in eclipse IDE

For creating a jsp file explore the project by clicking the + icon -> right click on WebContent -> New -> jsp -> write your jsp file name e.g. index -> next -> Finish.

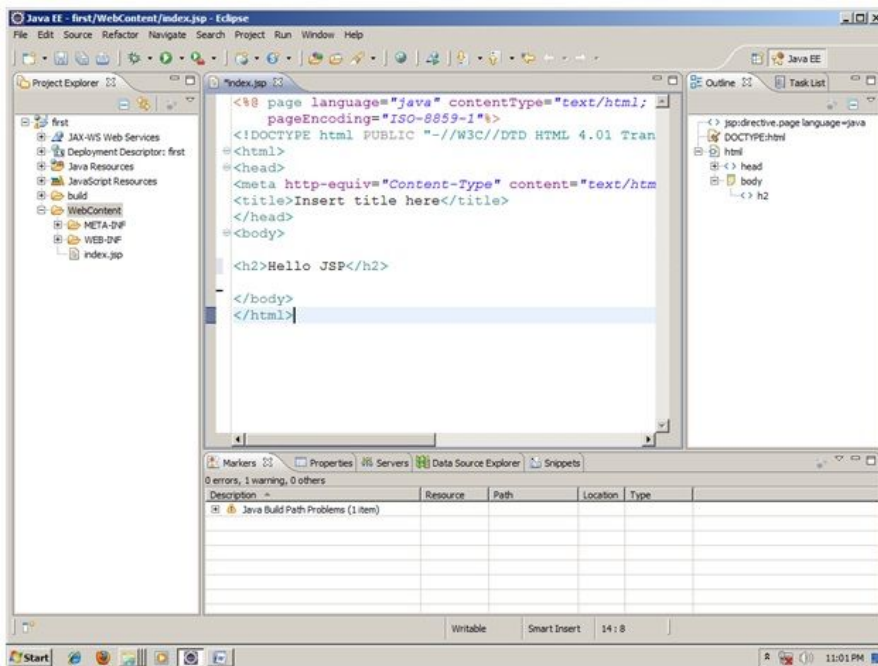

Now JSP file is created, let's write some code.

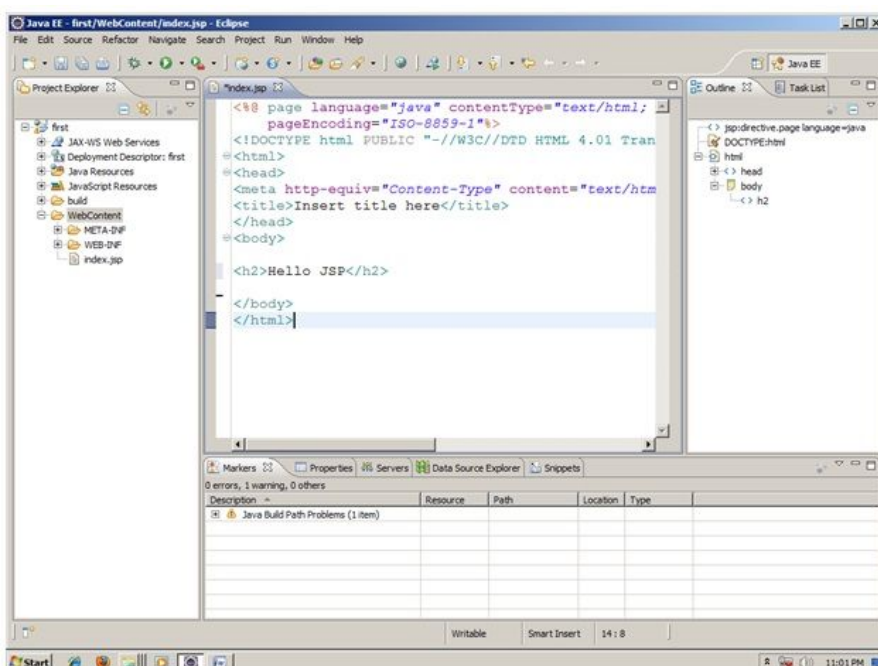

### 3) Start the server and deploy the project:

For starting the server and deploying the project in one step Right click on your project -> Run As -> Run on Server -> choose tomcat server -> next -> addAll -> finish.

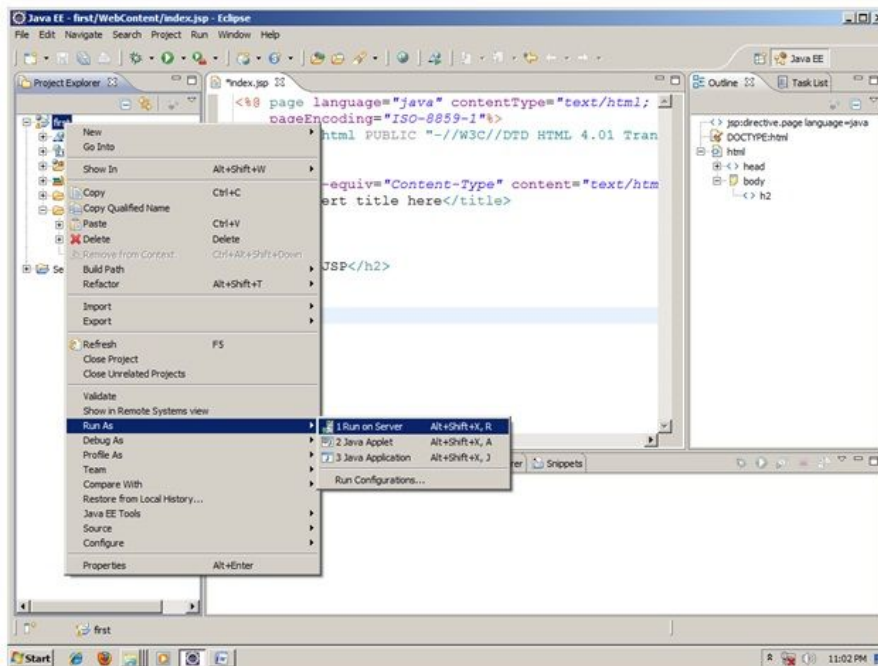

If you are using Eclipse IDE first time, you need to configure the tomcat server First. Click for [How to configure tomcat server in eclipse IDE](#)

### Now start the tomcat server and deploy project

For starting the server and deploying the project in one step Right click on your project -> Run As -> Run on Server -> choose tomcat server -> next -> addAll -> finish.

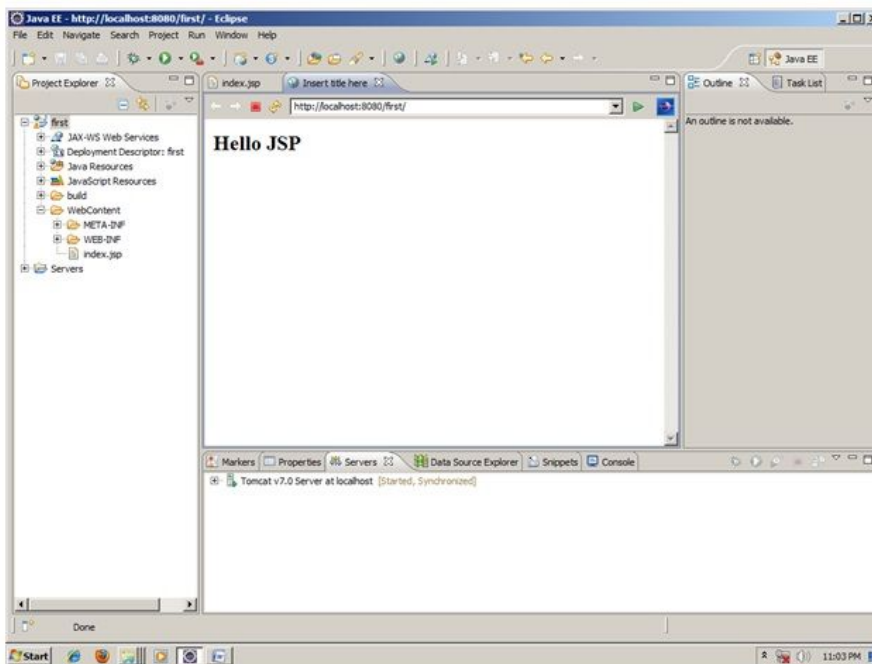

Yes, Let's see JSP is successfully running now.
