Config Implicit Object Example

<u>web.xml</u>

Let's say below is my **web.xml** file. I'm just defining servlet name and servlet mapping in it. Later, I would fetch few details from this file using config implicit object.

```xml
<web-app>
<servlet>
<servlet-name>BeginnersBookServlet</servlet-name>
<jsp-file>/index.jsp</jsp-file>
</servlet>

<servlet-mapping>
<servlet-name>BeginnersBookServlet</servlet-name>
<url-pattern>/index</url-pattern>
</servlet-mapping>
</web-app>
```

<u>index.jsp</u>

In this JSP page we are calling getServletName() method of config object for fetching the servlet name from web.xml file.

```html
<html>
<head> <title> Config Implicit Object</title>
</head>
<body>
<%
String sname=config.getServletName();
out.print("Servlet Name is: "+sname);
%>
</body>
</html>
```

Output:

This is the output screen for the above JSP page.
